Transaction Parameters

Adjust the top predictors to simulate transaction risk:

V14 (Primary Indicator)
-7.42

V4 (Anomaly Index)
0.00

V17 (Secondary Impact)
0.00

V10 (Behavioral Pattern)
0.00

V12 (Identity Component)
-10.48

V11 (Security Factor)
0.00

Transaction Amount ($)
50.00

Run AI Analysis

FraudX AI Production Dashboard

This system performs Real-Time Fraud Detection using a tuned XGBoost classifier. Inputs are based on the top influencing features identified through your SHAP analysis and a GENIUS part for predict any type on anomaly based on an isolation Forest and the cluster.

Understanding Behavioral Components & Feature Selection

Analysis Results

ALERT: FRAUDULENT TRANSACTION DETECTED

Risk Score

92.45%

↑ High Risk

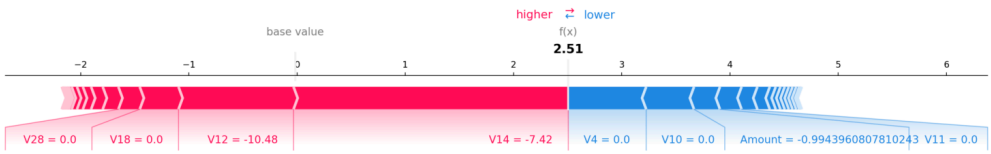
Model Intelligence:

The XGBoost model analyzed 30 dimensions. Primary drivers for this score were V14, V4, and V17. Simulated amount: $50.00.

Explainability Suite (XAI)

SHAP Explanation | LIME Local Diagnostic

Local Contribution (SHAP Force Plot)



Red bars push the risk HIGHER, blue bars push it LOWER.
